SUMMARY

Marketing Management undergraduate (B.Com, 2027) running three concurrent roles — agency leadership, SEO and content strategy, and remote B2B SaaS demand generation. Audited 13 brands across 500+ URLs. Leads a 10-member team. Builds marketing tools by specifying the system, directing the build, and verifying every output.

EXPERIENCE

Co-Founder — NeoArk Digital, Chennai, Tamil Nadu

Jan 2026 – Present

- Lead a 10-member team across concurrent client accounts — delegation, quality review and delivery.
- Built an outbound engine (ICP, 7-filter funnel, area x niche grid) that sourced and qualified 104 B2B leads across 4 funnels.
- Ran a marketplace launch end to end: market research, brand book, 30-day content calendar, LinkedIn kit and six carousels.
- Set the brand's positioning law and encoded it as an automated copy gate that blocks publishing on a banned-word fail.
- Audited a client's shipped app against agreed positioning and halted the creative when the product contradicted it.
- Trained non-technical team members to independent delivery in AI fluency, agency process and AI-assisted builds.

Marketing & SEO Intern — Siva Comics, Chennai, Tamil Nadu

Jun 2026 – Present

- Ran SEO, AEO and GEO audits across 13 brands and 500+ URLs, every finding shipped with a reproducible verification step.
- Specified 17 prioritised findings for an e-commerce client; client-side implementation moved site health 43 to 65.
- Withdrew a finished report hours before release after catching five extraction artefacts, then documented 14 false-positive categories.
- Directed a 2-minute AI-generated heritage film for a global IT services client: 24 shots, 38 clips, 17 cuts, two review calls.
- Built topical maps, content briefs and 30-day editorial plans; authored AI-citation plans, answer blocks and llms.txt.
- Built a 30-day Instagram content system and manage social pages for multiple brands.

Marketing Intern — Digimabble, Belgium (Remote)

Jan 2026 – Present

- Drive demand generation for Greenlane AI, a healthcare B2B SaaS product sold to doctors and private practices.
- Run the product's LinkedIn programme end to end: positioning, planning, copywriting and publishing.
- Write and run cold email sequences to medical practices — list building, segmentation, copy and follow-up.
- Research competitor positioning and audience segments to inform content strategy and messaging.
- Deploy AI workflows that shorten research and content production cycles.

SELECTED PROJECTS

Multi-Brand SEO / AEO / GEO Agent System — Claude Code skill · 1 router, 37 playbooks, 78 collectors

- Merged four open-source SEO repos into one auto-triggering router that loads exactly one playbook per request.
- Every finding is labelled Confirmed, Likely or Unverified, so client reports carry only measured claims.

Free Website SEO Audit Tool — Shipped on a client Next.js site

- Public lead-gen tool auditing any URL a visitor submits — titles, headings, canonicals, alt text, schema, security headers.
- Hardened against SSRF with per-hop redirect validation and fail-closed rate limiting; verified by a 98-test suite.

Rocket Carousel Maker — AI carousel generator

- Generates brand-ready carousels from structured prompts, with per-brand design systems and PNG, PDF and ZIP export.
- 86 render-verified decks and 361 slides; headless checks reject any slide that overflows, wraps or overlaps.

The State of Chennai SME Websites 2026 — Original research · OpenStreetMap / Overpass API

- Sampled 161 Chennai businesses from OpenStreetMap and audited 125, after discarding a web-search sample that returned three other continents.
- Published under CC BY 4.0 with Dataset schema; aggregate findings only, and four sites that disallowed crawling were excluded.

Seven Reusable AI Skills — Claude Code skills built from processes run manually first

- A 30-day content engine, a carousel studio with an anti-slop gate, a lead-gen engine, a prompt router and a teaching skill.
- Each encodes rules learned from real corrections rather than from a template.

AI Video Editor — Prompt-based terminal video editor

- Edits video from natural-language prompts instead of a timeline — effects, transitions, subtitles, overlays and multi-clip assembly.
- Covers animatics, contact sheets and automatic transcription for subtitles.

SKILLS

Marketing SEO / AEO / GEO, Content Strategy, Demand Generation, Keyword Research, GA4 & Search Console

AI AI Agent Orchestration, Claude Code / Codex / Cursor, Prompt & Context Engineering, n8n & MCP Workflows, Generative Video Production
